

Wednesday 27 March

10: to write a recount about our chemistry workshop.

First, at 9:45 we all lined up in pairs to go to Abingdon school to do some chemistry. It took like 5 minutes to get there. We finally arrived at Abingdon school when we got there we paired up and ~~we~~ I got paired up with Giovanni. He did a lot of experiments the experiment was we mixed a small amount of hydrochloric acid to a test tube then we added a tiny bit of red cabbage. When we added the red cabbage the hydrochloric acid turned pink. When we did that I was amazed that that happened. After that, we wrote what colour it turned after ^{we} carried on ~~it~~ with our epic experiments. The next ~~ex~~ experiment was we took a clean test tube and we mixed copper with ~~red cabbage~~ sodium hydrochloride hydroxide and it turned green. This is me and Gijsje Giovanni doing it, we had an amazing time doing it.

at the end of our time at the laboratory they got a balloon and they put hydrogen and they ~~put~~ set the balloon on fire and boom the balloon exploded and it was long gone. I had loads of fun at the laboratory that was the best time of my life.
