10. To write an article about your visit to the Abingdon Science Laboratory.

Abingdon Science Lab.

The Abingdon Science Laboratory is an amazing place to go, it is one of the greatest places in the world! My class and I were very lucky to go there to learn lots about electricity and other exciting things. Also it is a very educational place you could go there and learn lots of different things that you would not be able to do in a class room.

First of all, me and my father got given a balloon as got to rub it over my hair and it was really funny when my hair was sticking up. Learning about static electricity was so interesting and things I have never seen before. A little later, we made our own batteries by using equities you do not have in a primary classroom. We also made our own circuits which I found exciting and interesting at the same time.

At this amazing laboratory we used fascinating things that you would not get in a classroom for example making the battery we used salted water, zinc and carbon.

Sadly, it was time to leave and go back to school. However it was an amazing experience. I would recommend all schools to visit Abingdon Science Laboratory to learn new things in a exciting way. I'm so glad you enjoyed it!
