L.O. To write an article about your visit to the Abingdon Science Laboratory.

## Abingdon Science Laboratory

The Abingdon Science Laboratory is a very interesting and exciting place to visit. My class and I went on an amazing visit to the Laboratory and found out so many new facts and information about Science. It was a great opportunity and chance to go and do so many different experiments you wouldn't get to do in school. Happily, we were there and saw how educational everything was.

The topic that we learnt about was all about electricity, charge and static electricity. First, we were given a booklet to write our names and class on. Then, our leader there asked us to write as many words linked to electricity as we can in 2 minutes. I managed to write 18 words and everyone was asked interesting and challenging questions.

We did 3 extraordinary experiments: we made our own battery using four different liquids, then we learnt about parallel and series circuits and made our own circuits. We also used balloons as an example for static electricity and we rubbed our hair with the balloon to show static electricity. I found out new words and meanings such as the word electrolyte.

Having the wonderful opportunity to make new discoveries was delightful. Sadly it was now our turn to leave and walk back to school. However, I would recommend it as I really enjoyed our visit to the Abingdon Science Laboratory.

✓ A lovely article ✓

NS What does electrolyte mean? I think it means a word for the solutions we used for the battery.
