L.O. To write an article about your visit to the Abingdon science laboratory

The Abingdon science laboratory is a perfect place to learn about science.

You can do amazing experiments like making a battery that you can't do at school.

We all discovered a lot more and we found out about it in an exciting way; everyone had an amazing time.

First of all, we got in<sup>to</sup> pairs of two and we wrote all the words we already <sup>new</sup> about electricity. We had to try and get at least ten words. Only 2 pairs did! After that, we had to answer some questions about negative and positive charges. It was very interesting to learn about.

Later on, we made a battery and we filled in a table of results. Afterwards, we were making a circuit to try and make the lights turn on. It only worked with two batteries because there were two light bulbs. It was fantastic and very educational.

Sadly, it was time to go. However, I would recommend it because it is so exciting and educational, <sup>doing</sup> experiments.

We learnt a lot more and we are now brilliant scientists!

A lovely article, Isabelle ✓
