LO: To write an article about your visit to the Abingdon Science Laboratory.

Abingdon Science Laboratory is one of the best places on earth. Our school always takes us on these fun and educational trips which are always free and in walking distance. They's fantastic workshops allow us to release our creativity with state of the art equipment that can only be found in science laboratories, whilst boosting our educational levels to the top.

First, we played with some balloons to create some awesome static electricity. After that we made a gully junction battery with some salted water, zinc and carbon.

Finally, we made a circuit with only some wires and a light bulb - it was extraordinary.

After that, our day was finished. I was a little sad but also excited because I knew our amazing school would take us on another one of these breath taking experiences. I would recommend this place to any other school.

✓ A lovely article, Tommy
